

Getting Baseline and Evaluation Measures:

CHC Baseline Assessment

January 19, 2006

Nancy La Pelle, Evaluation Consultant

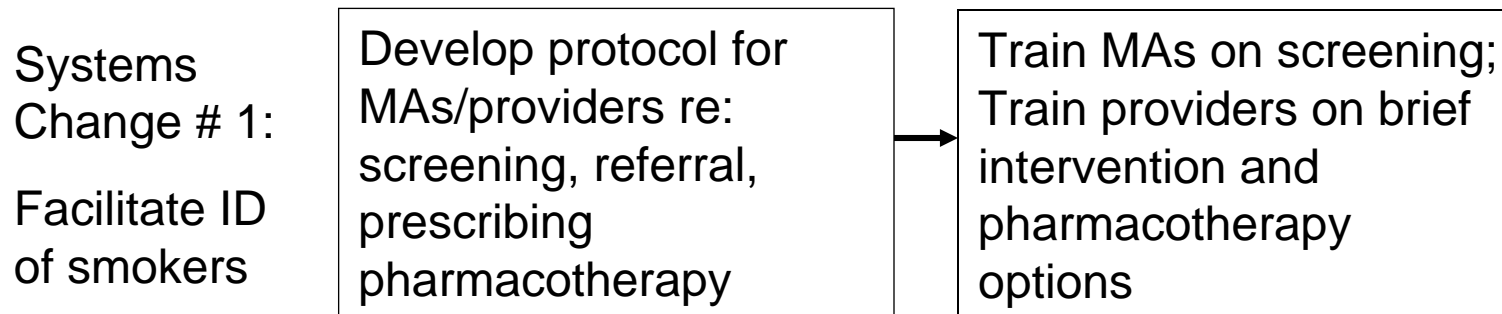

Baseline Assessment

- Assess current capability to address tobacco use using either existing data or your best estimate
- Set achievable goals – how much do you hope to achieve during grant period
- Complete assessment only for measures applicable to your planned intervention
- End of grant comparisons to be done:
 - Baseline to actual measures
 - Actual to goal set

Complete Only for Steps/Measures You Will Use as Part of This Systems Change Intervention

STEP 1. ROUTINELY IDENTIFY SMOKERS AT EVERY VISIT	Track Now	Plan to track	Current Baseline %	Actual data or estimate (A or E)	Projected % achieved by end of grant
1.1 Percentage of staff trained in the CHC's system to ask about smoking status at every patient visit.*	√	√	50%	E	100%
1.2 Percentage of new patients seen who are routinely screened and documented for smoking status in medical chart	√	√	80%	A	100%
1.3 Percentage of tobacco users identified and documented at <i>repeat</i> visits to CHC.		√	0%	E	50%
1.4 Percentage of visits with smokers where screeners <u>prompted</u> clinician to conduct brief interventions.	N/A	N/A			

Example preliminary process map for Great Brook Valley

Systems Change # 2: Facilitate Intake & Assessment, Loopback; No-show follow-up
